22 November 2024

Dear Regulatory Sandbox Team,

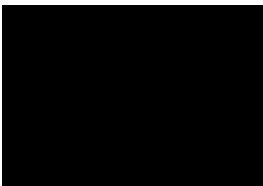

Connected Kerb is the UK's leading electric vehicle (EV) charging provider and is on track to become the largest charging network in the UK by the end of 2024. We deliver end-to-end kerbside charging solutions, including hardware, software, and operational expertise, bringing deep knowledge and experience to the Australian market.

We support PLUS ES's trial waiver application, including the proposed expansion outlined in the addendum. As a UK-based company, we see the waiver as a step toward aligning Australia's EV charging metrology with international practices. While the ideal scenario would involve only a single metering component for pole-mounted chargers, the proposed waiver represents a positive step towards enabling affordable and scalable EV charging infrastructure in Australia.

We welcome more trials of this nature in the Australian market ahead of the Australian Energy Market Commission's 2026 rule change, which aims to support more integrated metering approaches for EV charging.

Please don't hesitate to contact me if you have any questions or require further information.

Yours Sincerely

Director
